

**On the way to autonomous driving:
The Story of NIO**

**Dr. Kamran Turkoglu
Advanced Technologies Division, NIO
San Jose, CA**

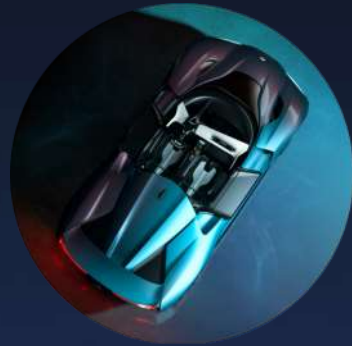

NIO is more than a car company

Conceived and planned since 2012 and formally founded on November 28, 2014. NIO is a global company that designs, develops, and produces smart, high-performance, premium electric vehicles. Our aspiration is to shape a better life for our users through thoughtful design, amazing services, and cutting-edge technology.

NIO's Products

FE Racing Car

EP9

EVE

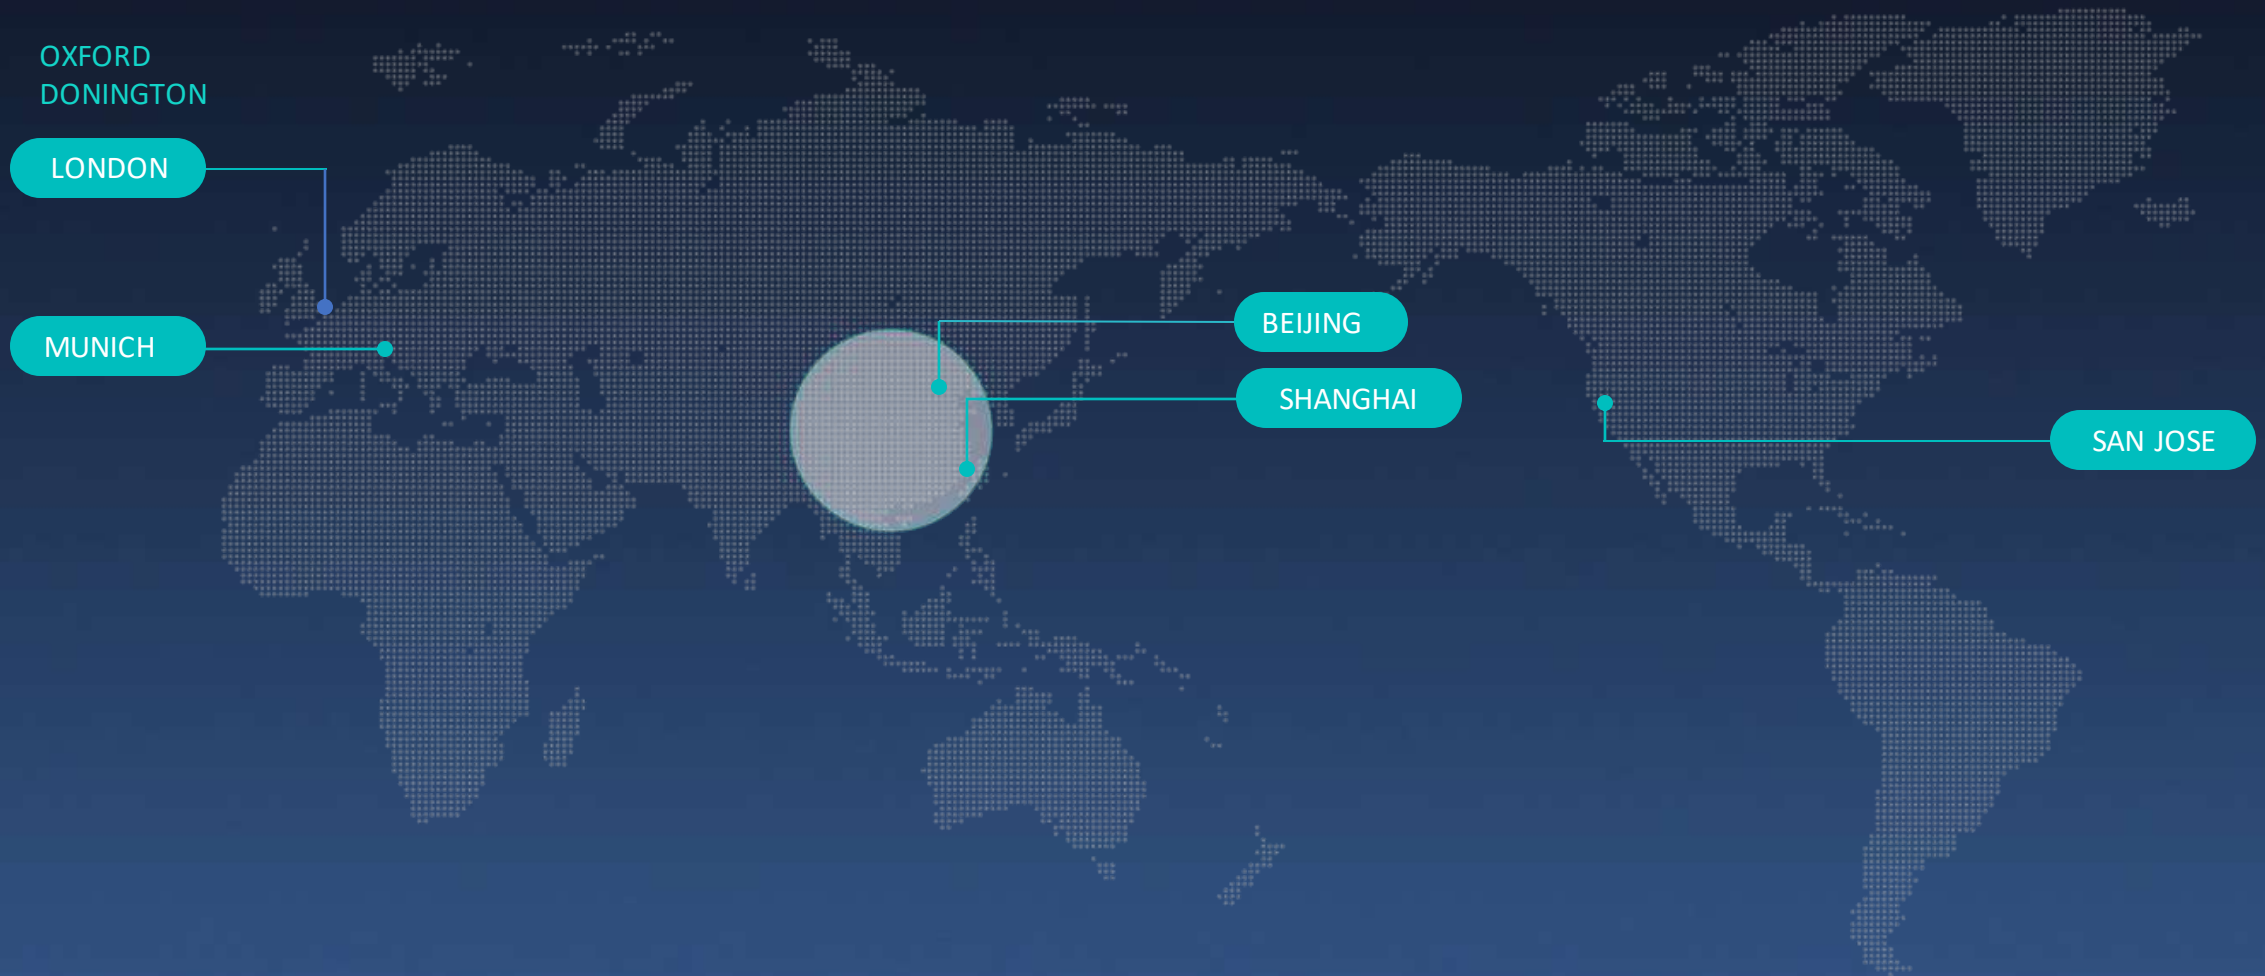

ES8

ES6

NIO has over 9,500 employees and world-class research and development, design, and manufacturing centers in Shanghai, Beijing, San Jose, Munich, London and other locations.

OXFORD
DONINGTON

LONDON

MUNICH

BEIJING

SHANGHAI

SAN JOSE

NIO USA - San Jose - Advanced Technologies Group:

HW/FW

SW & Algorithms

Perception

Systems Integration/Validation

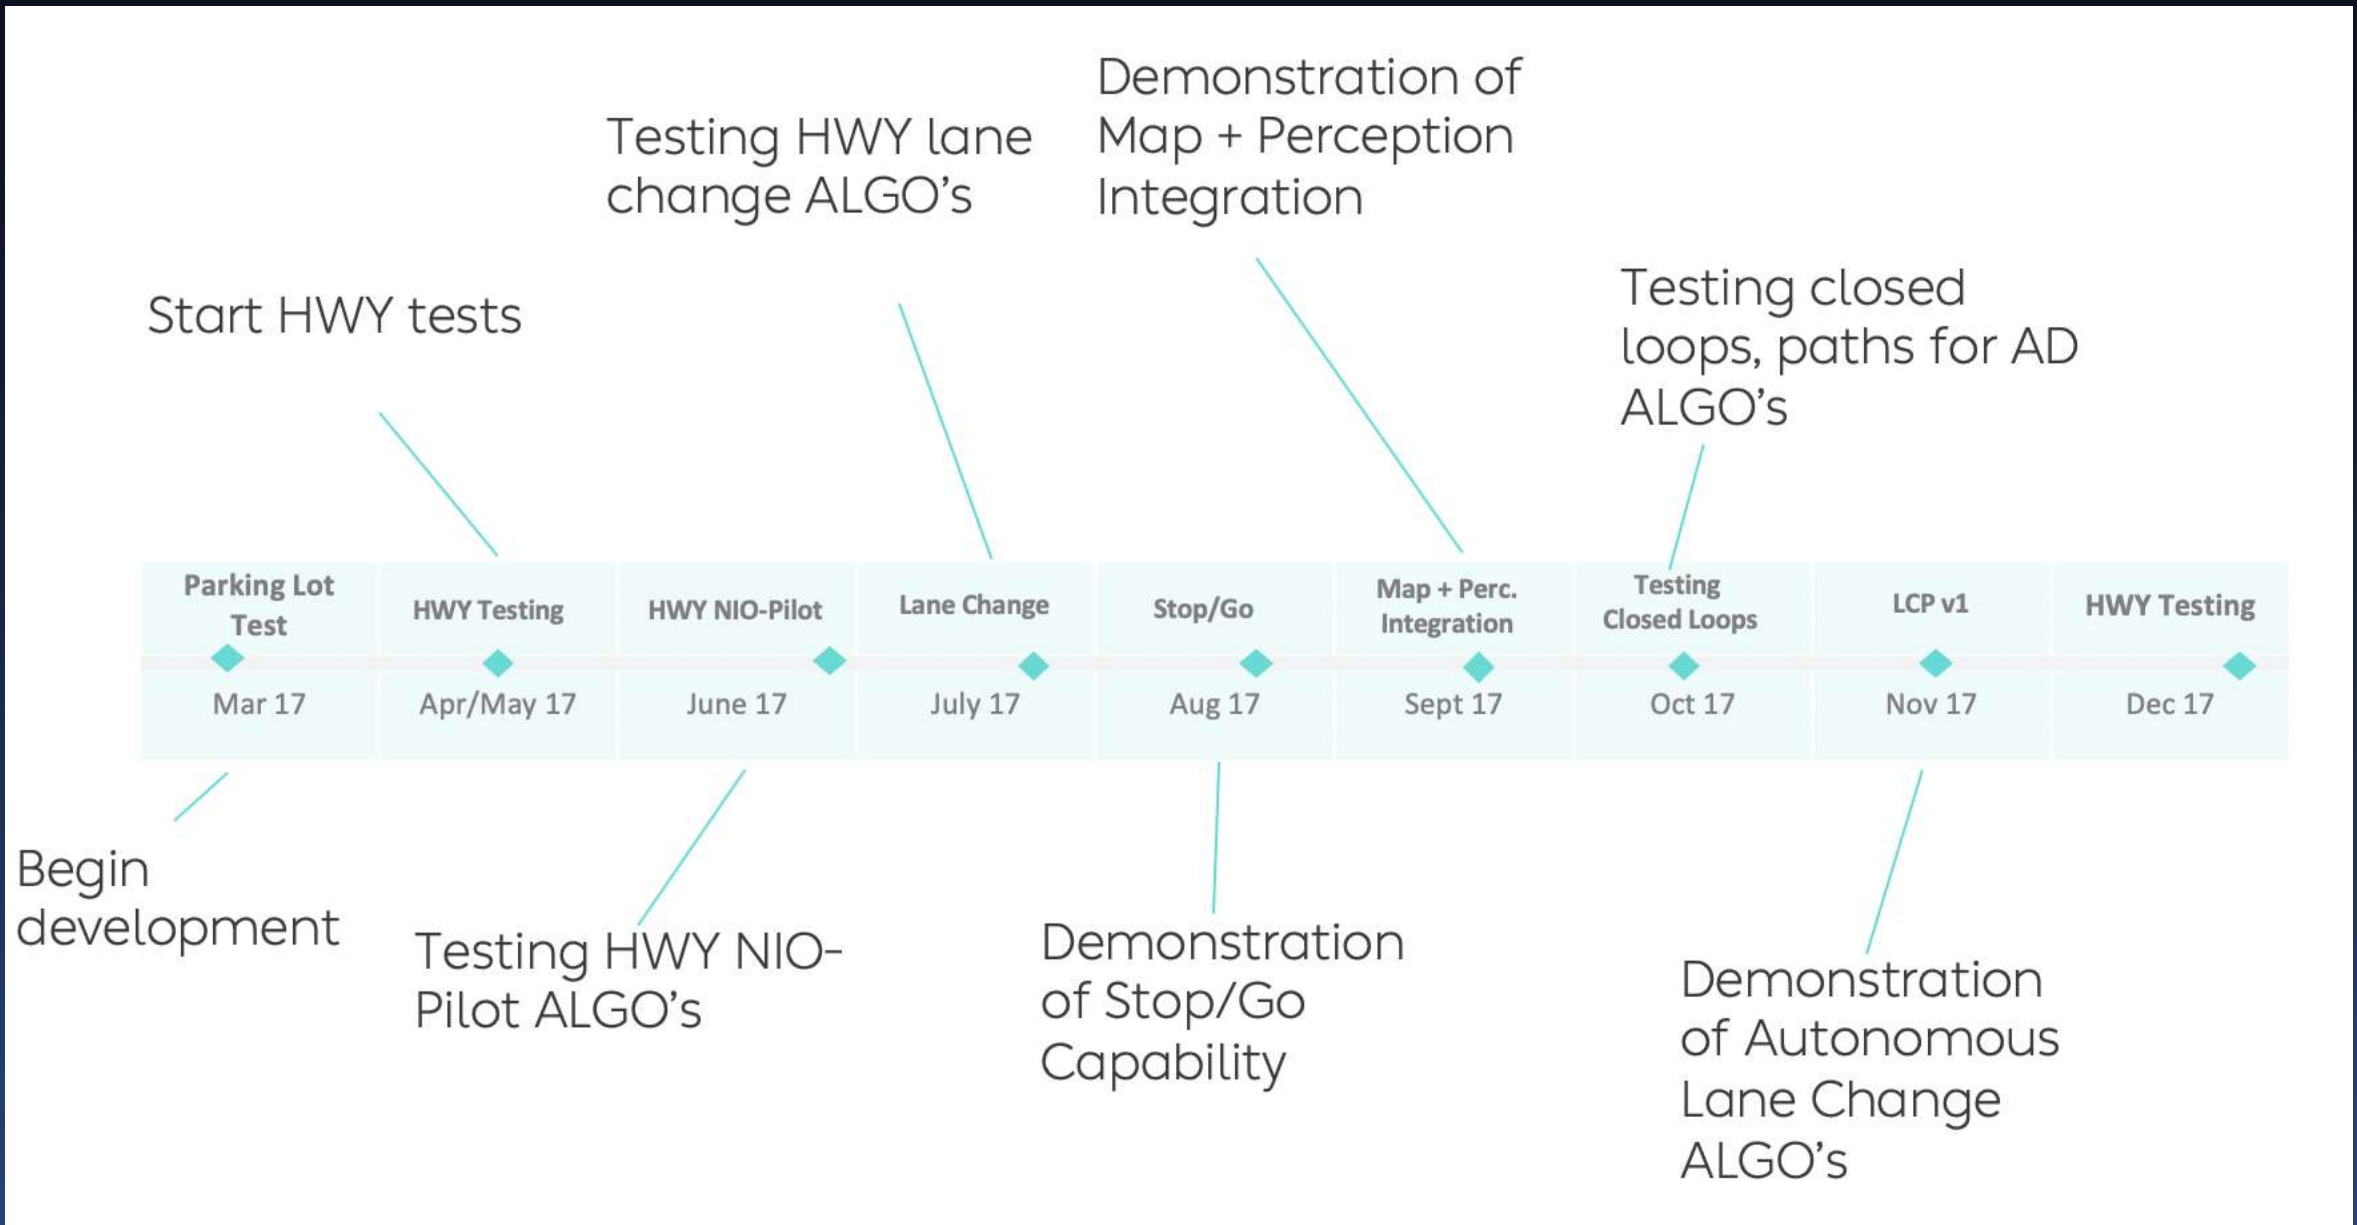

350+ people

EP9 – Autonomous Lap Project 09/16 – 02/17
One of the Fastest Electric Cars in the World
From Track to Road

Autonomous Driving Platform: Timeline

Autonomous Driving Platform: Timeline @ 10/2017

Autonomous Driving Platform: Timeline

Autonomous parking solutions

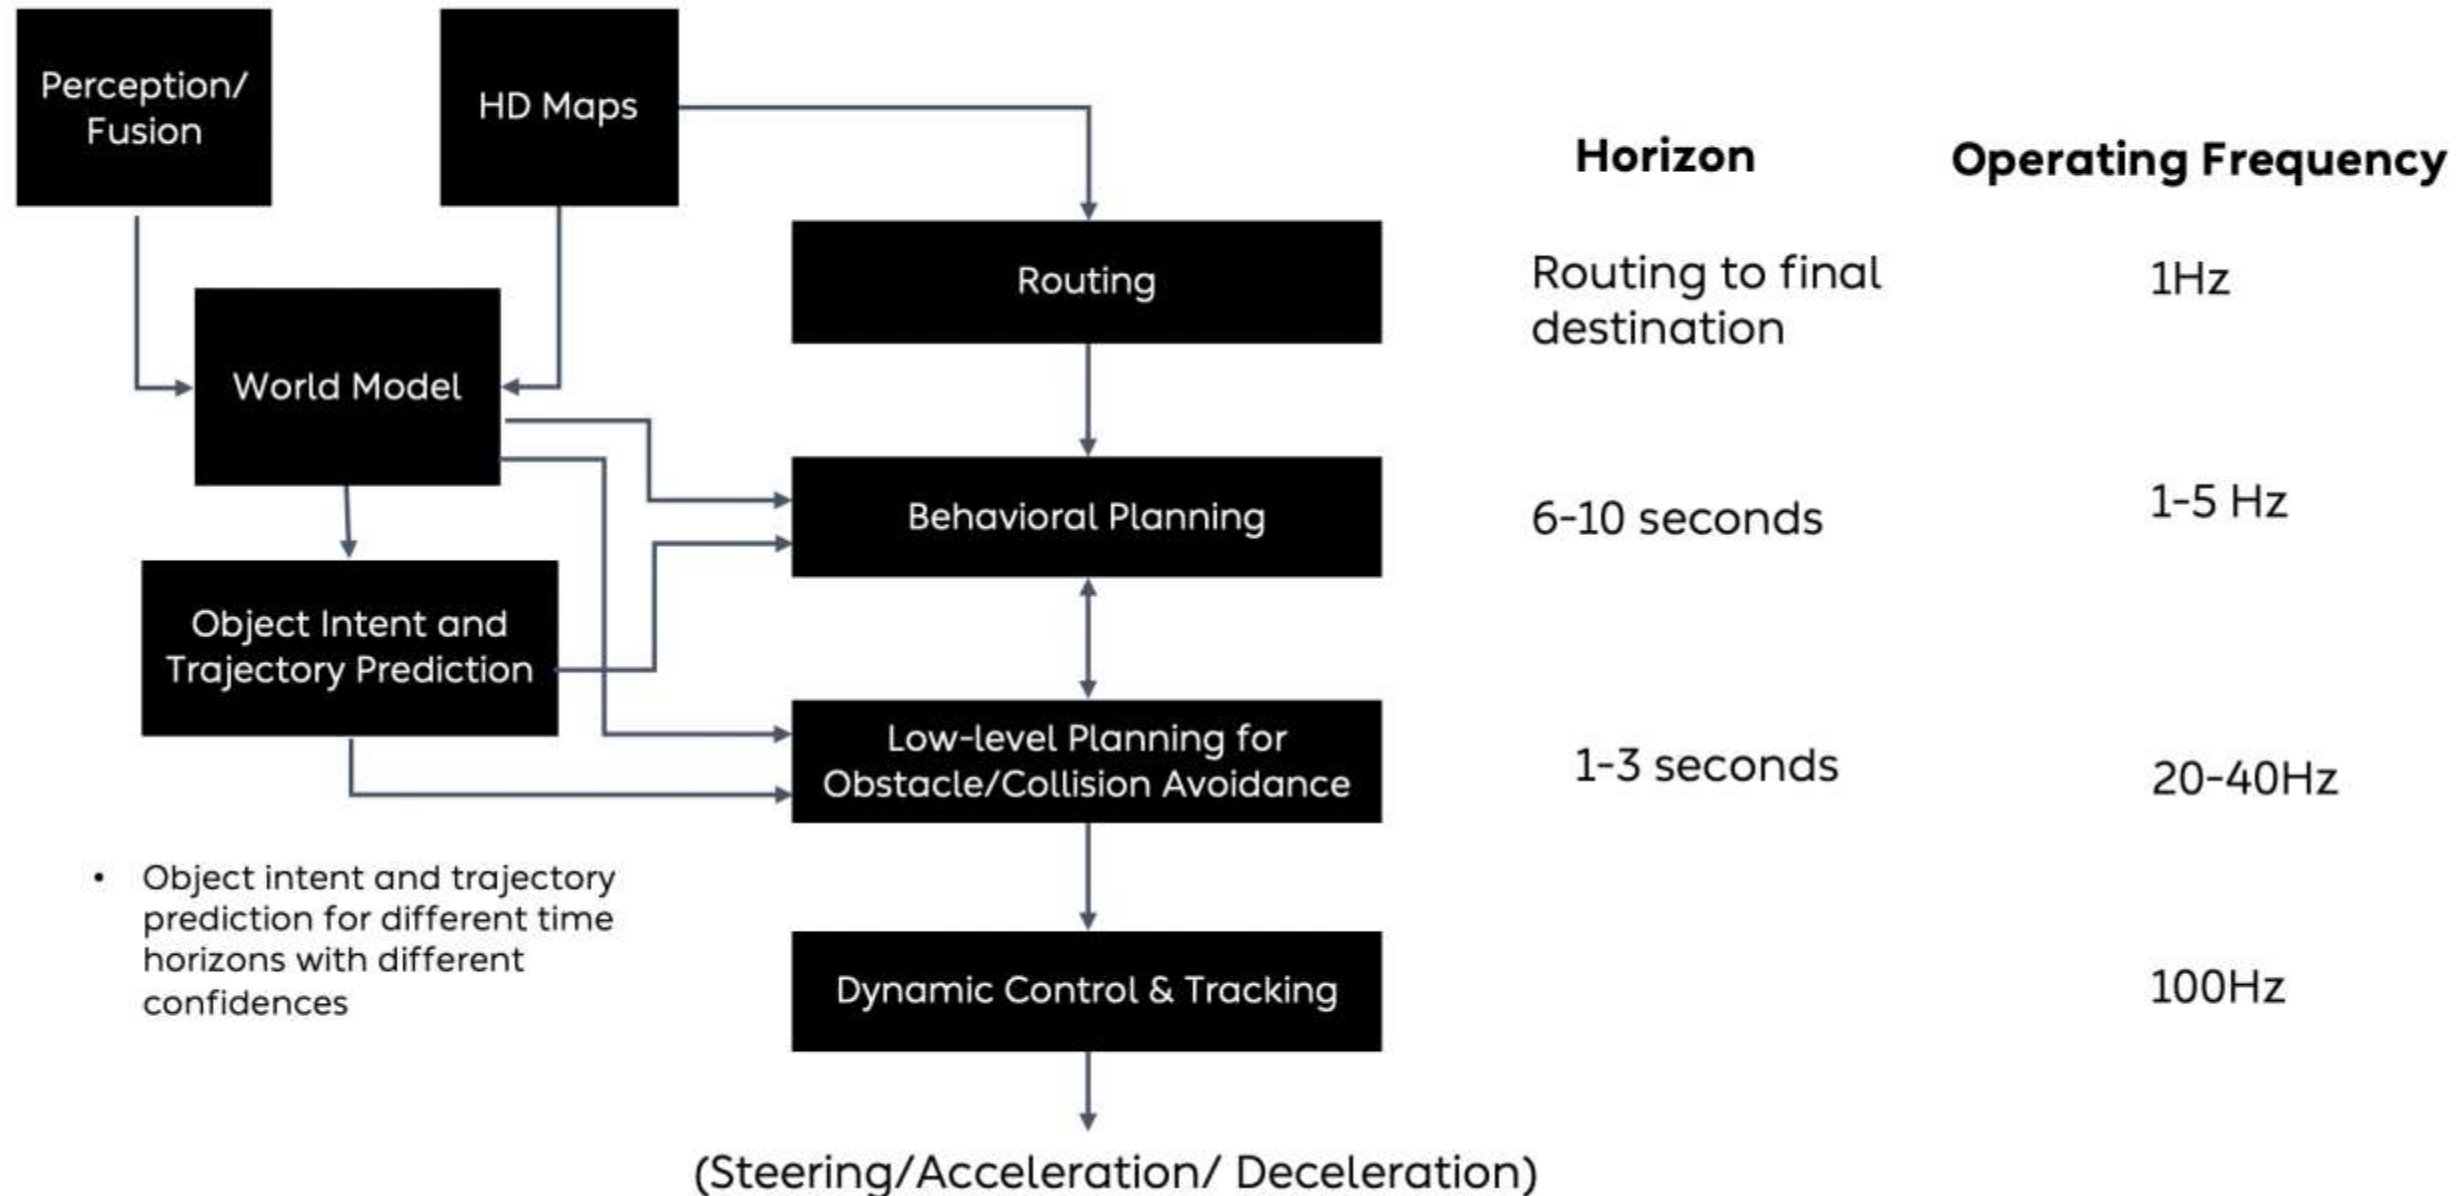

Improve Real-Time Planning for Obstacle/Collision Avoidance

Autonomous Driving Platform: L4

- **GOAL:**
 - **Fully redundant L4 Solution**
 - **(SW & HW)**
 - **Based on our EV platform**
 - **Release first HWY-L4**
 - **Extend to Urban setting**

ALGORITHMS

Algorithm Selection and Evaluation

- **Linear Systems theory**
- **Nonlinear Systems theory**
- **Stochastic Systems theory**
- **Markov processes**
- **Statistics based learning strategies**

- **Simulation environment: SIL & MIL**

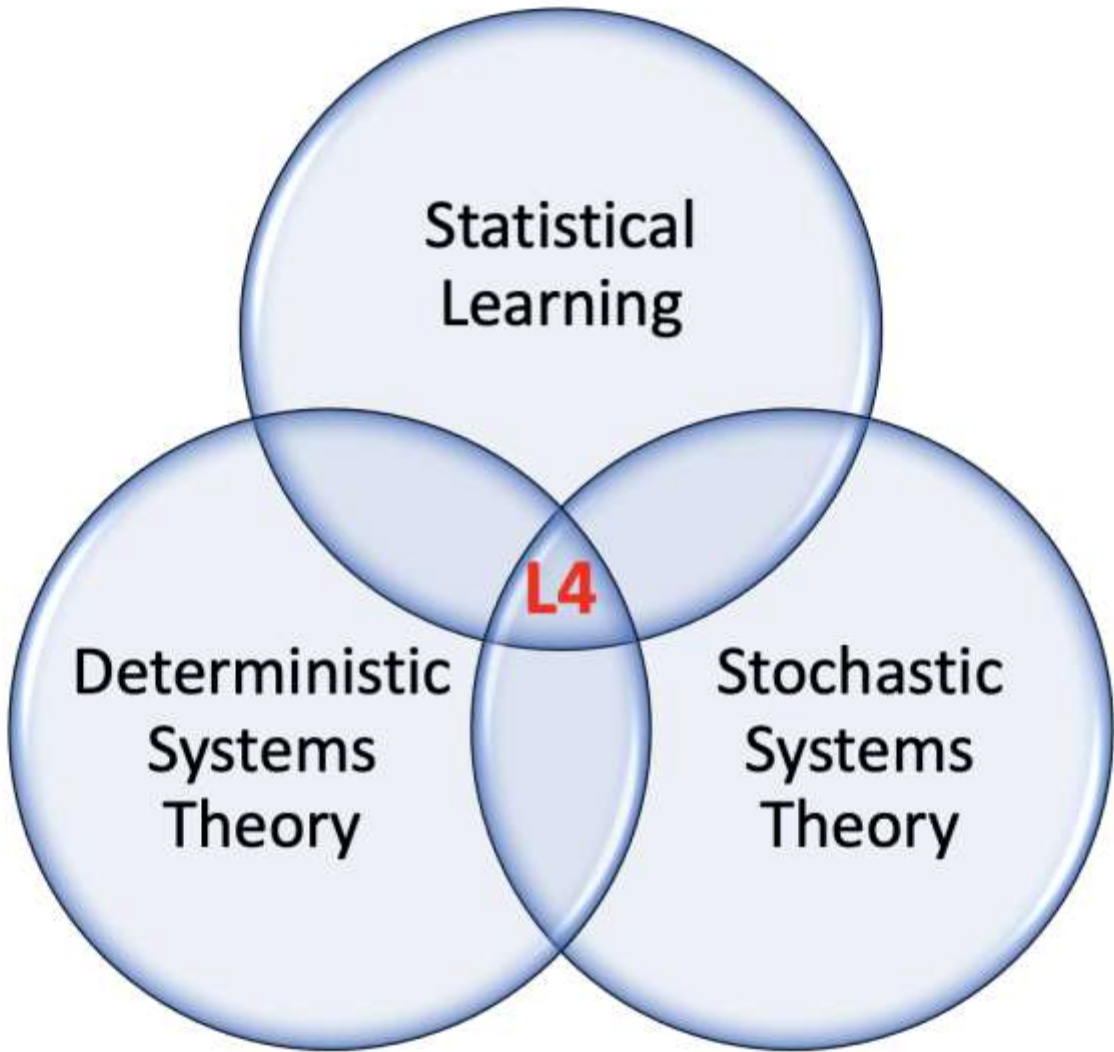

- **Simulation environment: SIL & MIL**

L4 Autonomous Driving in HWY Environment

Problem domain and Solution

ALGORITHMIC CHALLENGES

- **Achieving robustness guarantees**
 - **Handling qualities for all operation domain ad conditions**
- **Achieving safety/collision guarantees**
 - **97.8% → is it enough?**
 - **98.9%. → guarantee safety?**

ALGORITHMIC CHALLENGES

- **Testing and validation**
 - **`simulation-driven-miles`**
 - **`real-world-miles`**
 - **How much is enough??**
- **5million miles?!**
- **10 million miles?!**
- **15million miles?!**

ALGORITHMIC CHALLENGES

- **Testing and validation**
 - **Different conditions**
 - **Mumbai vs. London vs. Melbourne**
 - **How do you guarantee same level of safety with different level of driving cultures?**

Blue Sky Coming

Thank you
